

Miguel Brito

First-year Civil Engineering student, FEUP

ABOUT ME

I have just started Civil Engineering at the University of Porto. Maths and physics were always my strongest subjects, and in my last year of school I also spent a lot of time programming, mostly for a robotics competition where our team came second. I am looking for a university project where I can build real things with other students and learn outside the classroom.

EDUCATION

BSc in Civil Engineering 2026 to present
Faculty of Engineering, University of Porto (FEUP)
First semester.

Secondary school, Science and Technology 2023 to 2026
Escola Secundária Avelar Brotero, Coimbra
Final average 18.5/20. In 12th grade I got 20 in Mathematics and 20 in Physics, where most of the year was mechanics (rigid bodies, fluids, gravitation) and electric and magnetic fields. High merit award in all three years.

PROJECTS AND COMPETITIONS

BotOlympics 2026, 2nd place March 2026
Robotics competition, University of Coimbra (sponsors included Critical Software)
Team of four from my school. The robot had to find its way through a walled maze on its own and deliver boxes to marked spots. I wrote its control code from scratch in C/C++: reading the sensors, driving the motors and deciding where to go next. On the real track far more went wrong than we could have planned for, from sensors reading differently under the venue lights to wheels slipping. Most of the three days went into finding each failure and fixing it before the next round. It taught me that simple, well-structured code that is easy to explain to the team holds up best when conditions get tough.

PmatE National Science Competition, 1st place in Mathematics 2026
University of Aveiro, team entry
Our team won the maths category and a study grant from the university.

Maths olympiads 2019 to 2026
National finalist in the Portuguese Mathematical Olympiad (2024). Attended Projeto Delfos, the olympiad training programme of the University of Coimbra, in 11th and 12th grade. Canguru Matemático: 3rd at school level (2019) and 1st in my school cluster (2021).

Programming lessons 2024 to 2025
Private lessons in C, C++ and Java. This is what I later used to program the BotOlympics robot.

Amateur radio licence October 2026
Studying for the ANACOM Category 1 exam in Porto. Once licensed I want to send text messages through QO-100, a geostationary satellite used by radio amateurs.

AWARDS

High merit award, secondary school: 2023/24, 2024/25, 2025/26
Distinguished student, 9th grade (2023)
School merit grant, Parish of Coimbra (2022/23)

Photos and more detail on each item in this CV

PROGRAMMING

C and C++ (used on a competition robot), Java, Python.

LANGUAGES

Portuguese: native
English: upper intermediate

INTERESTS

Structures and materials, heat transfer, embedded programming, radio and satellite communications.

OTHER

Erasmus+ exchanges in Poland (2022) and Serbia (2023)
Referee at the district badminton tournament, 2025 and 2026
